

SABIN THAPA

Full Stack Developer | AI-Integrated Software Engineer

sabin.thapa07051999@gmail.com | +1 (862) 220 3587 | Kearny, New Jersey, 07032
[iamsabin07.com](mailto:sabin.thapa07051999@gmail.com) | [linkedin.com/in/iamsabin07](https://www.linkedin.com/in/iamsabin07)

PROFESSIONAL SUMMARY

Full Stack Developer with 7+ years of experience in architecting, building, and scaling web and mobile applications across fintech, healthcare, and enterprise platforms. Proven track record delivering systems supporting 10,000+ users, 500K+ daily transactions, and \$75M+ in annual financial workflows with 99.9% uptime. Hands-on expertise integrating generative AI and LLM capabilities — including Retrieval-Augmented Generation (RAG), agentic workflows, vector search, and prompt engineering — into production applications using OpenAI and Anthropic Claude APIs. Combines deep full-stack engineering (ASP.NET Core, React, Node.js, TypeScript) with cloud-native architecture (AWS, Azure, Docker, Kubernetes) and applied AI/ML fluency to independently own products end-to-end, from system design through deployment.

CORE COMPETENCIES

Full Stack Development • REST & GraphQL API Design • Generative AI & LLM Integration • Retrieval-Augmented Generation (RAG) • Agentic AI Workflows • Prompt Engineering • Cloud Architecture (AWS/Azure) • Microservices & Distributed Systems • CI/CD & DevOps Automation • System Design • Database Architecture • AI-Assisted Software Development • Data Pipelines & Analytics • Team Leadership & Mentorship

PROFESSIONAL EXPERIENCE

Full Stack Developer, Monroe Township, NJ
Applied Dynamic Solutions

May 2022 – Present

- Developed and maintained 15+ production web and mobile applications across the full stack (ASP.NET Core, Node.js, Python, React, Next.js, TypeScript), delivering RESTful APIs, responsive UIs, and reusable component libraries.
- Established reusable frontend templates with styled components, authentication, routing, and notification systems, reducing new project setup time by 70% and accelerating feature delivery across scrum teams.
- Introduced EF Core schema management and environment-specific migration workflows, implementing version-controlled database migrations, rollback strategies, and integrity validation pipelines while reducing production migration time by 30%.
- Implemented CI/CD pipelines in Azure DevOps with automated testing and security validation, leveraging Docker containers and Kubernetes for consistent deployment environments, reducing release cycle time by 60% while enforcing code quality in Agile workflows.
- Architected a highly reliable, distributed multi-cloud media pipeline with FFmpeg-based transcoding and serverless orchestration (AWS Lambda, Azure Functions), reducing end-to-end delivery latency by 40%.
- Built extensibility platforms and developer tooling, publishing reusable SDKs for OpenAI, AWS, and Azure integrations to standardize secure API consumption across teams, reducing integration overhead by several engineer-days per release.
- Designed a data-driven dashboard using D3.js and R for predictive analysis of royalty distribution trends, identifying payment anomalies with 95% precision and saving the organization 15+ hours of manual auditing per month.

Key Client: Where Trades Go (East Hanover, NJ)

- Led 0-to-1 development of a full-stack mobile and web jobs marketplace connecting tradespeople and contractors, scaling the platform to 10,000+ users, including 2,000+ paid contractors, and establishing a production-ready system for real-time job matching.
- Designed and implemented AI-driven weighted matching algorithms and optimized data structures for contractor-job recommendations, improving search relevance, reducing real-time response latency, and achieving a 95% user satisfaction rate.

Key Client: AFM and SAG-AFTRA (Valley Village, CA)

- Deployed an automated e-forms workflow to replace legacy paper-based processes, delivering a 7x increase in signed form return rates.
- Optimized legacy royalty distribution systems supporting financial workflows processing \$75M+ annually with improved reliability and auditability.

Software Engineering Intern, New York, NY

July 2021 – April 2022

American Express

- Assisted in developing and maintaining 10+ REST API endpoints using ASP.NET Core, gaining hands-on experience with backend development and secure coding practices.
- Built and enhanced 20+ reusable React.js components, contributing to responsive web applications used by 5,000+ internal users.
- Collaborated with senior engineers to implement and test new features, resolving 30+ bugs and improving application stability.
- Wrote 50+ unit tests and participated in code reviews, helping improve code quality and reduce regressions before deployment.
- Worked with a team of 8+ engineers in an Agile environment, contributing across 15+ sprint cycles while learning software development best practices, Git workflows, and CI/CD processes.

Web Developer, New York, NY

April 2018 – Jun 2020

Cedar Gate Technologies

- Designed 15+ REST APIs and React UIs for healthcare data integration, serving 5,000+ provider users and processing 1M+ patient records monthly across 5+ partner systems.
- Optimized MySQL/PostgreSQL databases and built Kafka-driven batch ingestion pipelines handling 200K+ records daily, improving query performance and cutting processing time while reducing data inconsistency.
- Collaborated with product and clinical operations teams to translate healthcare data requirements into scalable API contracts and UI workflows, ensuring HIPAA-aligned handling of sensitive patient data.
- Wrote unit and integration tests and participated in code reviews to maintain code quality, catching defects before deployment and improving overall system reliability.
- Documented API specifications and data integration workflows, reducing onboarding time for new engineers and partner system integrations.
- Participated in daily stand-ups and sprint planning in an Agile/Scrum environment, contributing to backlog grooming and iterative delivery of healthcare data features.

PROJECTS

Consensus — AI-Powered Boardroom Simulator | Backend Developer | Oct – Dec 2025

- Built a Retrieval-Augmented Generation (RAG) platform integrating vector search, knowledge retrieval, and reinforcement-learning-based simulation, reducing inference latency by 35% and improving multi-model

decision accuracy by 1.5x; the concept was later adapted by a teaching institute for student mock-interview simulations.

NFC Card System | Full Stack Developer | Jul – Aug 2025

- Built and deployed a full-stack digital identity platform integrating NFC contact exchange, Stripe payments, OAuth 2.0 authentication, and JWT-based session management, with WebSocket-driven real-time analytics, scaling to 100+ active profiles.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, C#, Python, SQL, HTML5, CSS3, R

Frontend: React, Next.js, React Native, Redux, TailwindCSS, D3.js, Vite

Backend: ASP.NET Core, Node.js, Express, FastAPI, Flask, GraphQL, REST APIs, Entity Framework Core

AI / Generative AI / LLMs: OpenAI API, Anthropic Claude API, LangChain, LangGraph, Model Context Protocol (MCP), Retrieval-Augmented Generation (RAG), AI Agents / Agentic Workflows, Prompt Engineering, Vector Embeddings, Fine-Tuning Fundamentals, Hugging Face, LLM Evaluation & Guardrails

AI-Assisted Development: GitHub Copilot, Claude Code, Cursor, ChatGPT for code review & debugging

Cloud & DevOps: AWS (Lambda, EC2, S3), Azure (Functions, DevOps), Docker, Kubernetes, CI/CD, Git, Terraform basics

Databases & Search: PostgreSQL, MongoDB, MySQL, MSSQL, Redis, Qdrant, Elasticsearch, Vector Databases

Testing & Quality: JUnit, Selenium, Cypress, Jest, Playwright, Automated Regression Testing

Core CS: Data Structures & Algorithms, System Design, Distributed Systems, OOP, Microservices, Event-Driven Architecture

EDUCATION

New England College | Executive M.S. in Data Science and Analytics | GPA: 4.0 | Expected Aug 2027

Caldwell University | B.S. in Computer Science | GPA: 3.88 | Dec 2022
